## Unit Conversion - Practice Exercises Answers

## Answer 1:

Convert these to units ( $\mathrm{m}, \mathrm{g}$ or L ):

| No. | Units | Converted to $\mathbf{m}, \mathbf{g}$, or $\mathbf{L}$ |
| :--- | :--- | :--- |
| 1 | 98 mg | 0.098 g |
| 2 | 25 ml | 0.025 L |
| 3 | $1025 \mu \mathrm{~g}$ | 0.001025 g |
| 4 | 19 kl | 19000 L |
| 5 | 589 mm | 0.589 m |

## Answer 2:

Convert the units to micro (units):

| No. | Units | Converted to $\mu$ |
| :--- | :--- | :--- |
| 1 | 28.6 g | $28600 \mu \mathrm{~g}$ |
| 2 | 960 L | $960000 \mu \mathrm{l}$ |
| 3 | 13 kg | $13000000 \mu \mathrm{~g}$ |
| 4 | 0.52 m | $520 \mu \mathrm{~m}$ |
| 5 | 5 km | $5000000 \mu \mathrm{~m}$ |

## Answer 3

Stock required: 250 mg
Stock strength: $0.3 \mathrm{~g} / 2 \mathrm{ml}$
Converting the SS amount to mg .
So, $\mathrm{SS}=0.3 \mathrm{~g}=0.3 \times 1000=300 \mathrm{mg}$
10 mls of the liquid has 300 mg of the medication. So, we need to calculate the volume that would contain 250 mg of the medication.

Volume $=\frac{250}{300} \times \frac{2}{1}=1.67 \mathrm{mls}$

## Answer 4

Stock required (SR): 150 mg
Stock strength (SS): 0.25g
Converting the SS amount to mg .
So, $S S=0.25=0.25 \times 1000=250 \mathrm{mg}$

Number of tablets (Dose) $=$| 150 mg |
| ---: |
| -------- |
| 250 mg |

$$
=0.6 \text { tablet }
$$

## Answer 5

Lianne weighs 130 lbs
$1 \mathrm{~kg}=2.2 \mathrm{lbs}$
So, weight in kilograms =

130lbs
2.2 lbs
$=59.09 \mathrm{~kg}$

## Answer 6

Total volume to be given: $350 \mathrm{ml} / 8 \mathrm{hr}$
Converting the hour into minutes, ( $1 \mathrm{hr}=60 \mathrm{mins}$ )
So, Total time $($ in mins $)=8 \times 60=480 \mathrm{mins}$

| Flow rate= | 350 mls |
| :---: | :---: |
|  | 480 mins |
|  | $\mathrm{mls} / \mathrm{min}$ |
