24. Taking business management courses in order to operate public organizations.	5	4	3	2	1

PART 2: YOUR PROFILE

Now that you have indicated your preferences, enjoy building your personal profile. The results will indicate those college majors you should explore further.

Step 1: Study the profile sheet on the next page.

- Notice that there are twenty-four college major possibilities across the top. Your campus may offer a different list with different titles. If so, have your college counselor assist you in making adjustments.
- There is space (number 25) for a major you prefer over those listed. Examples include Agriculture, Forestry, Home Economics, Geography. If your preferred major is not listed, write it in, rate it on the scale, and make comparisons.
- The scale on the left side measures high, medium, and low interest in each major.
- A space is provided across the bottom for you to enter the total for each major.

Step 2: Total the numbers you circled for question 1 on each of the three previous pages. Enter this total (it will be between 3 and 15) at the bottom of column 1 (Health Services).

Step 3: Total the numbers for question 2 and enter it at the bottom of column 2 (Criminal Justice). Continue until you have entered the total at the bottom of each of the twenty-four columns.

Step 4: On the scale at the left (0 to 15), locate the level equal to your total in each column. Place a dot at the level of your total for each column. Connect these dots and you have your profile.

Step 5: Indicate your top three choices with a star or other distinctive mark. You will want to research these three possibilities first.
