Data Management

There is software that can be used to support qualitative research and the UniSA library has comprehensive guides for using these

Endnote

Use of an endnote library provides a place to store and manage all of the references used for research
https://guides.library.unisa.edu.au/ManagingReferences

NVIVO

NVIVO is a data management tool which gives a central place to store qualitative data and sort the data into codes.

However, NVIVO does not complete the analysis – this is done by the researcher

https://guides.library.unisa.edu.au/ResearchDataManagement/AnalyseData

Covidence

Can be used to support the screening of references for a systematic review of qualitative research (or any systematic or scoping review)
