

Installing the VDI Client on an External non-Windows Device

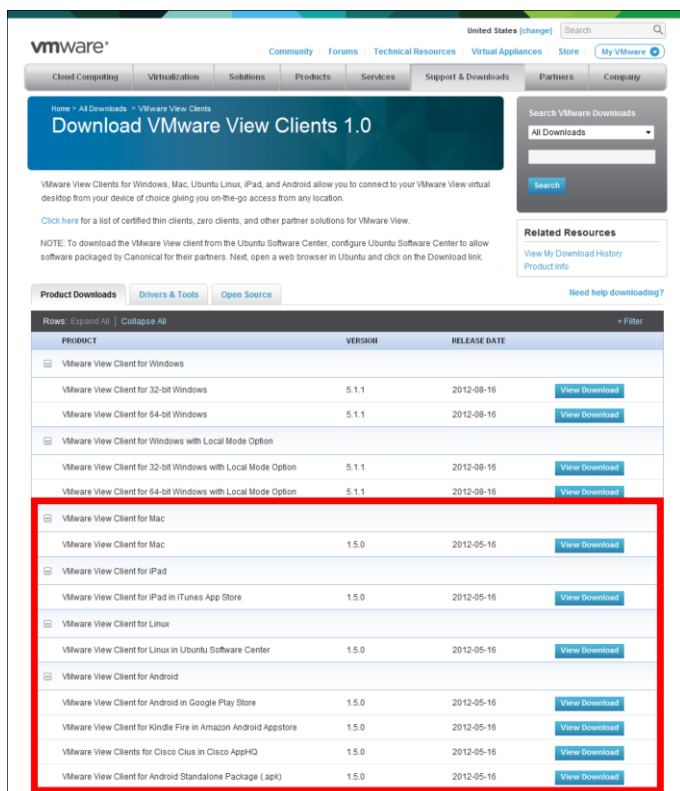

Alert: These instructions are specific to installing the Virtual Desktop Infrastructure (VDI) Client on a non-Windows device. To install the VDI Client on a Windows device please refer to the [‘Installing the VDI Client on a Windows Device’](#) user guide.

Instructions

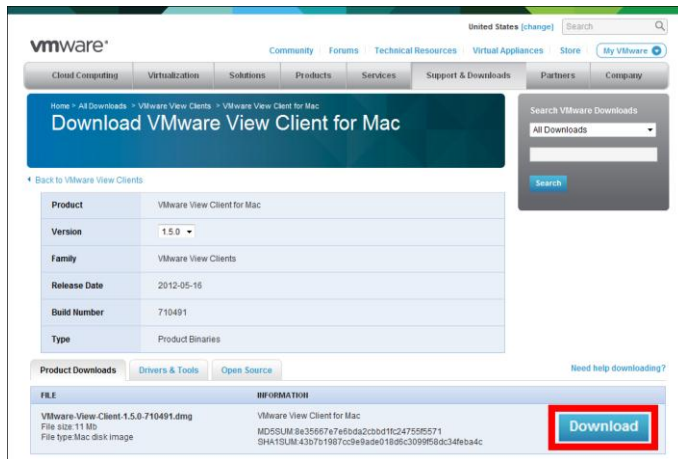

Step 1: Open your web-browser of choice and go to: <https://virtualdesktop.unisa.edu.au/>, then select the **View Client for Windows** link.

Step 2: Select the corresponding **View Download** button for your system-type.

Step 3: Select the **Download** button.

The installation wizard for the selected version of VMware View Client will be displayed, allowing you to follow the prompts to install the VDI Client.

If prompted to enter a **Default View Connection Server**, enter: **virtualdesktop.unisa.edu.au**
